RE Inflatable Collar

Recognizing the growing significance of personal watercraft in the realm of water sports, Ride Engine is dedicated to supporting and crafting products tailored to this need.

The Ride Engine PWC Inflatable Collar stands out as a custom-designed solution, meticulously crafted to match the specific dimensions of your PWC. Constructed using durable and UV-resistant PVC, this inflatable collar serves the dual purpose of enhancing watercraft stability while preserving agility and maneuverability. Moreover, it offers an additional layer of protection and safety for riders who may come into contact with the PWC during rider acquisition along with providing crucial impact protection for the watercraft itself.

IMPORTANT DELIVERY NOTE

> *It's essential to note that the Ride Engine PWC Collars are made to order, precisely tailored to your PWC hull specifications. Upon placing your order, a representative from our dedicated Ride Engine service team will promptly contact you to gather details about your PWC's model and year for programming. Following the order placement, the construction and shipping process will take approximately four weeks for delivery.*

RIDEENGINE

Why Use an Inflatable Collar?

Stability

Inflatable collars provide additional buoyancy to the watercraft, enhancing stability and making it more resistant to capsizing or tipping over.

Improved Handling

Inflatable collars can enhance the overall handling and maneuverability of the PWC. They can provide better control, especially in rough or choppy waters.

Flotation

In the unfortunate event that your PWC starts taking on water, the inflatable collar will maintain your watercraft in an upright position and afloat.

Reduced bow spray

When traversing through turbulent waters, the inflatable collar of a PWC effectively disperses water, shielding the rider from being sprayed in the face.

Impact Protection

The inflatable collar acts as a cushion in case of collisions or impacts with other objects in the water or other vessels. This can help protect both the rider and the watercraft from damage.

Ability to carry more equipement

As water enthusiasts increasingly engage in various sports on the same day, the necessity of being able to carry additional equipment on personal watercraft has become essential for both watermen and waterwomen.

RIDEENGINE

PRO - Construction - **$2,400 USD**

The Pro Inflatable Collar features a Traction Top layer, which provides excellent grip when stepping onto the collar. This layer not only ensures good traction but also offers superior UV protection and helps prevent accidental punctures. Additionally, the Pro model features our new TPU molded handles, which are our proprietary design. These handles are tall and easy to grab, with just the right amount of flex, providing an exceptional level of functionality and comfort.

(PRO) Traction Top

Traction Top layer, which provides excellent grip when stepping onto the collar.

(PRO) TPU Moulded Handles

These handles are tall and easy to grab, with just the right amount of flex, providing an exceptional level of functionality and comfort.

Bow Collar Second Layer Protection

We apply an additional layer of PVC to the collar to protect it from wear and tear caused by the trailer winch.

Installation kit

All RE collars come with the installation essentials for any brand-model PWCs.

3D PWC scanned

Our collars are meticulously designed in 3D to perfectly fit your specific PWC. If we haven't created tailored collars for your Year/Model PWC before, we're more than happy to design one for you.

Protective side bumper

Our collars are meticulously designed in 3D to perfectly fit your specific PWC. If we haven't created tailored collars for your Year/Model PWC before, we're more than happy to design one for you.

Marine Grade PVC

PVC fabric is used in most production manufactured inflatable boats, we source the most high quality PVC for our PWC Collars.

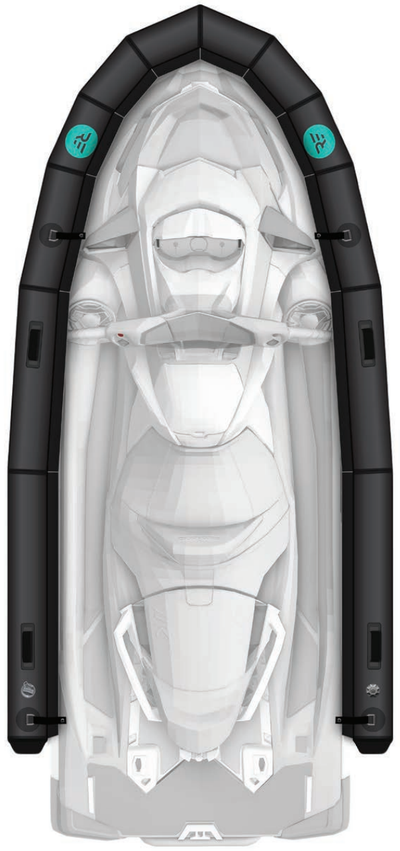

5.5 PSI Relief Valve

We've designed the collar to not surpass the pressure of 4.5PSI, even if exposed to excessive heat.
